Experimentos

Laha peske čiro caklos, trebars ajso, so has andre lende o paňale.

Papirošno rentica strihinaha pro kotera u pro agora keraha farebno bodka – ča jekh farba pro jekh koter.

Andro caklos daha paňi, avka kaj te hin jekh koter andro paňi, ale farebno bodka kaj te hin avri le caklostar.

O katora andre peste cirdena o paňi u dikheha so pes ačhola!!!

[translation for the teacher]

We will take a transparent glass, for example a preservation jar.

We will cut a paper towel into strips, draw a circle with a colour felt tip pen onto one end of each strip, one colour for one strip only.

We will fill the glass with water so that a strip is fully emerged in the water but the circle remains above the brim of the glass.

The strips will become soaked with water. You will be surprised what you will see.
